Scouting Summary

COMMON THEMES

- Off Spin, averaging 85.3 kph (up to 95.4).
- Typical length is **4-5m** (their good length); median 4.4 m.
- Stock ball is **full outside off, turning away, drifting in, passing outside off** (21% of deliveries).
- Goes round the wicket 100% of the time against left-handers.
- Turns it 4.2° on average; 29% of balls turn ≥5°.

BIGGEST THREATS

- Most dangerous length is **Good Length** (7 wkts, 3.1% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 29% of wickets pitching a **good length on the 5th stump**.
- Beats the bat 6.2% of tracked balls (false-shot 10.2%).
- Most likely to dismiss you **caught** (50% of wickets).
- 29% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st, midwicket: deep, mid off: regulation.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length on the 5th stump** (19% of runs).
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak straight down the ground (37%) — his main scoring release.
- Cash in when he goes **good length outside off** (economy 5.1, beats the bat only 10%).

Repeatability

P61

±1.0 m · vs spin bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 57 last 5 vs 48 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index
Caught	50%	59%	0.85×
Stumped	29%	4%	6.45×
LBW	21%	20%	1.08×

Share of his 14 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Slip: 1st 2](#) [Midwicket: deep 1](#) [Mid off: regulation 1](#)
[Mid on: regulation 1](#) [Long off: regulation 1](#) [Midwicket: regulation 1](#)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full outside off, turning away, drifting in, passing outside off (21% of deliveries, economy 2.52). Minor variations: full on the stumps (20%) and full in the channel (19%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning away, drifting in	21%	2.52	3	14%
full on the stumps ▶	turning away, drifting in	20%	1.98	4	7%
full in the channel ▶	turning away, drifting in	19%	1.23	0	4%
a good length outside off ▶	turning away, drifting in	17%	5.13	6	10%
a good length in the channel ▶	turning away, drifting in	12%	3.21	0	8%
a good length on the stumps ▶	turning away, drifting in	4%	4.50	1	12%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 203 balls · 4 wkts · econ 2.63

Top ball type	%	Econ	Wkts
full outside off	25%	2.18	0
full on the stumps	22%	2.31	1
a good length outside off	17%	2.32	3
full in the channel	15%	1.11	0

Old ball (31+ ov) · 444 balls · 10 wkts · econ 3.12

Top ball type	%	Econ	Wkts
full in the channel	20%	1.27	0
full outside off	19%	2.71	3
full on the stumps	19%	1.83	3
a good length outside off	17%	6.33	3

Most lethal: **full Stumps** (3.1 wkts/100).

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST CAME FROM
A good length on the 5th stump
29% of mapped wickets (4 of 14)

RUNS — WHERE MOST CONCEDED
A good length on the 5th stump
19% of runs (57 of 295)

DANGER LINE
5th stump
6 wkts / 155 balls · 3.3% adj (3.9% raw)

DANGER LENGTH
Good Length
7 wkts / 209 balls · 3.1% adj (3.3% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 5th stump
4 wkts / 70 balls · 3.9% adj (5.7% raw) · low sample

Most threatening pitching a good length on the 5th stump (7 wkts, 3.1% strike). Most wickets come from a good length on the 5th stump, while he leaks the most runs a good length on the 5th stump.

NEW BALL (≤ 30 OV)

—
· danger length good length · 4 wkts off 203 balls

OLD BALL (31+ OV)

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	203	4	22.2	2.63	50.8	12%	4.63 m
Old ball (31+ ov)	444	10	23.1	3.12	44.4	9%	4.53 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	207	4	30.0	3.48	51.8	9%	4.65 m
Middle (4–7)	266	5	26.4	2.98	53.2	8%	4.34 m
Tail (8–11)	174	5	13.6	2.34	34.8	14%	4.64 m

Scoring Profile (vs left-handers)

59% of his runs come in boundaries — a boundary every 14 balls; most runs go to straight down the ground (37%); the sweep hurts most (15 fours/sixes at 3.5 runs/ball).

BOUNDARY %
59%

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	38	84	28%	12	2.21
Work/Nudge	43	70	23%	5	1.63
Sweep	20	69	23%	15	3.45
Cut	21	48	16%	6	2.29
Pull/Hook	6	20	7%	4	3.33

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (141/141) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at wide of 6th — pitches around 5th stump and moves it back.

Runs come mostly on the off side (61%).

Where They Pitch It

Pitches it full on the stumps most often (19%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 5th stump, but strikes most often pitching on the 5th stump.

Speed & Spells

He drops ~3.2 km/h from his opening spell to later spells, is a touch slower in the 2nd innings, and loses ~1.5 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Bowls exclusively round the wicket to left-handers (647 balls) — never goes over the wicket in this data.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	0 (0%)	—	—	—	—	0	—
Round	647 (100%)	Stumps	4.6 m	0%	2.97	14	59%

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m; more repeatable than 61% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 21 dismissals, the wicket ball lands about 85 cm shorter than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.8 m	0%	3.42	1.0%
Ball 2	4.5 m	0%	2.77	2.8%
Ball 3	4.4 m	0%	2.30	1.9%
Ball 4	4.5 m	0%	3.34	2.8%
Ball 5	4.4 m	0%	2.27	2.7%
Ball 6	4.7 m	0%	3.72	1.7%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 90% of right-arm spin); releases about 69 cm from the middle stump. Comes wider round the wicket (69 cm over vs 86 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	40%	751	3.83	7	68.6	107
Wide (>75cm)	60%	1,131	3.51	18	36.7	63

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	55%	1%	69%	30%
Round the wicket	45%	0%	4%	96%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A big turner of the ball; skids it on with lower bounce; gets sharp drift in the air.

Generates above avg turn and above avg drift for a spin bowler; turns it away more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	2.02°	79th pct (above avg)	3% away / 97% in
Turn	4.02°	68th pct (above avg)	100% away / 0% in
Bounce	4.1°	26th pct (below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 6th stump** (21% of play-and-misses). Overall he beats the bat 6.2% of tracked balls (false-shot 10.2%, n=647).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
