Scouting Summary

COMMON THEMES

- Right Fast, averaging 131.3 kph (up to 139.9).
- Typical length is **5-6m** (their good length); median 6.7 m.
- Stock ball is a **good length wide outside off** (31% of deliveries).
- Goes round the wicket 98% of the time against left-handers.

BIGGEST THREATS

- Takes 100% of wickets pitching **full wide outside off**.
- Beats the bat 5.6% of tracked balls (false-shot 21.1%).
- Most likely to dismiss you **caught** (67% of wickets).
- 100% of catches are behind the wicket (keeper / slips / gully); most often to slip: 1st, keeper.

AREAS TO EXPLOIT

- Concedes most runs pitching **full wide outside off** (32% of runs).
- Short ball: 29% of deliveries, economy 4.6 — 0 wkts from 26 short balls.
- Most of his runs leak square/through the off side (53%) — his main scoring release.

Swing

P22

0.6° · vs pace bowlers

Bounce

P85

4.4° · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

AVG SEAM

0.59°

about average

AVG SWING

0.64°

in-air

How he gets you out	His %	Base	Index
Caught	67%	68%	0.99×

Share of his 3 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: Slip: 1st 1 Keeper 1

Angle & variations: Round the wicket to LHB (97%), stays over to RHB · slower balls 3.6% (~124 kph)

WICKETS — WHERE MOST CAME FROM

Full wide outside off

100% of mapped wickets (2 of 2)

RUNS — WHERE MOST CONCEDED

Full wide outside off

32% of runs (14 of 44)

Most wickets come from full wide outside off, while he leaks the most runs full wide outside off.

Zone shares are over his **mapped** wickets — 1 wicket pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Scoring Profile (vs left-handers)

74% of his runs come in boundaries — a boundary every 11 balls; most runs go to the off side (53%).

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Pull/Hook	6	19	44%	4	3.17
Drive	5	17	40%	4	3.40
Work/Nudge	5	7	16%	0	1.40

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (16/16) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

Wicket balls pass the stumps mostly at 5th stump — pitches around wide of 6th and moves it back.

Where They're Scored Off

Runs come mostly on the off side (53%).

Where They Pitch It

Pitches it a good length wide outside off most often (30%); drops short often (28%).

Where Wickets Come From

Wickets come mostly from balls pitched full wide outside off.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Sequencing & Over Construction

Release Point & Crease Use

A high release point (taller than 93% of right-arm pace); releases about 64 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	70%	264	3.32	4	36.5	66
Wide (>75cm)	30%	113	3.66	3	23.0	38

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	78%	1%	89%	10%
Round the wicket	22%	0%	0%	100%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A hit-the-deck bowler who bangs it into a hard length for steep bounce and seams it around.

Generates about average seam and below avg swing for a pace bowler; seams it away more to left-hand batters (65%).

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.64°	21st pct (below avg)	86% away / 14% in
Seam	0.59°	56th pct (about average)	65% away / 35% in
Bounce	4.4°	85th pct (well above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Wide of 6th** (33% of play-and-misses). Overall he beats the bat 5.6% of tracked balls (false-shot 21.1%, n=90).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wks to qualify).
