Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 85.4 kph (up to 94.6).
- Typical length is **4-5m** (their good length); median 4.2 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the top of off** (27% of deliveries).
- Goes round the wicket 5% of the time against left-handers.
- Turns it 4.6° on average; 38% of balls turn ≥5°.

BIGGEST THREATS

- Most dangerous length is **Full** (3 wkts, 0.7% adjusted strike).
- Danger pitching line: **Stumps**.
- Takes 33% of wickets pitching **full in the 4th-stump channel**.
- Beats the bat 4.9% of tracked balls (false-shot 12.0%).
- Most likely to dismiss you **caught** (60% of wickets).
- 33% of catches are behind the wicket (keeper / slips / gully); most often to long off: regulation, square leg: backward, square leg: short leg.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (23% of runs).
- Away from full, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (42%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 6.2, beats the bat only 12%).

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's striking more often right now (avg 17 in his last 5 Tests vs 30 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	746	26	16.8	3.51	28.7	22%	85	4.66 m
Career	3,234	51	30.3	2.87	63.4	13%	85	4.55 m

How he gets you out	His %	Base	Index	Catches to: Long off: regulation 1 Square leg: backward 1
Caught	60%	59%	1.02×	Square leg: short leg 1 Mid on: regulation 1 Slip: 1st 1 Keeper 1
LBW	30%	20%	1.51×	Angle & variations: Round the wicket to RHB (98%), stays over to LHB

Share of his 10 wickets by type, indexed against the base rate vs the average spin bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full outside off, turning in, drifting away, hitting the top of off (27% of deliveries, economy 3.00). Minor variations: a good length outside off (15%) and a good length wide outside off (15%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning in, drifting away	27%	3.00	1	10%
a good length outside off ▶	turning in, drifting away	15%	3.91	2	8%
a good length wide outside off ▶	turning in, drifting away	15%	6.23	0	12%
full wide outside off ▶	turning in, drifting away	15%	4.18	0	20%
full in the channel ▶	turning in, drifting away	11%	3.86	2	7%
full on the stumps ▶	turning in, drifting away	11%	4.77	1	10%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 337 balls · 5 wkts · econ 3.88

Top ball type	%	Econ	Wkts
full outside off	29%	2.64	1
a good length outside off	18%	3.33	1
a good length wide outside off	12%	6.83	0
full in the channel	11%	4.00	1

Old ball (31+ ov) · 564 balls · 5 wkts · econ 3.62

Top ball type	%	Econ	Wkts
full outside off	26%	3.29	0
full wide outside off	19%	3.66	0
a good length wide outside off	18%	5.91	0
a good length outside off	13%	4.50	1

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

WICKETS — WHERE MOST COME FROM
Full in the 4th-stump channel
33% of mapped wickets (2 of 6)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
23% of runs (110 of 483)

DANGER LINE
Stumps
5 wkts / 300 balls · 1.5% adj (1.7% raw)

DANGER LENGTH
Full
3 wkts / 425 balls · 0.7% adj (0.7% raw) · low sample

Most threatening pitching full on the stumps (3 wkts, 0.7% strike). Most wickets come from full in the 4th-stump channel, while he leaks the most runs a good length wide outside off.

Zone shares are over his **mapped** wickets — 4 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	337	5	43.6	3.88	67.4	14%	4.72 m
Old ball (31+ ov)	564	5	68.0	3.62	112.8	11%	4.55 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	366	4	57.8	3.79	91.5	12%	4.68 m
Middle (4–7)	358	4	61.2	4.11	89.5	12%	4.60 m
Tail (8–11)	177	2	41.0	2.78	88.5	13%	4.68 m

Scoring Profile (vs left-handers)

41% of his runs come in boundaries — a boundary every 16 balls; most runs go to the leg side (42%); the sweep hurts most (19 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	101	120	34%	3	1.19
Sweep	40	106	30%	19	2.65
Drive	34	65	19%	7	1.91
Cut	9	20	6%	3	2.22
Pull/Hook	12	19	5%	2	1.58
Slog	6	16	5%	2	2.67

Direction from ball-tracking (all scoring shots); shot type recorded on 64% of scoring balls (212/333) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (15%); rarely drops short (0%).

Where Wickets Come From

Wickets come mostly from balls pitched full in the 4th-stump channel, but strikes most often pitching on the stumps.

Speed & Spells

He holds his pace across spells, is a touch slower in the 2nd innings, and loses ~1.8 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (95%, 857 balls); round the wicket is a rare change-up (5%, 44 balls).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	857 (95%)	Stumps	4.7 m	0%	3.61	9	41%
Round	44 (5%)	Stumps	4.7 m	0%	5.86	1	37%

Over the Wicket

Where he pitches it from over the wicket (857 balls).

Round the Wicket

Where he pitches it from round the wicket (44 balls).

Sequencing & Over Construction

Consistent with his length (length spread ± 1.1 m; more repeatable than 58% of spin bowlers); holds a steady length right through the over; and holds the same crease position through the over.

And tends to strike with a straighter ball after working across the batter (23% straighter than the ball before).

Across 36 dismissals, about 3 km/h slower — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	4.6 m	0%	4.52	2.3%
Ball 2	4.6 m	0%	3.87	0.0%
Ball 3	4.7 m	0%	3.50	1.3%
Ball 4	4.7 m	0%	4.04	1.4%
Ball 5	4.6 m	0%	3.09	0.7%
Ball 6	4.7 m	0%	3.09	0.7%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 95% of left-arm spin); releases wide of the stumps (102 cm out, wider than 84% of left-arm spin); varies his spot on the crease a lot (more than 91% of left-arm spin). Comes wider round the wicket (51 cm over vs 102 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Tight (<45cm)	5%	141	4.34	1	102.0	141
Standard (45–75)	22%	625	3.50	7	52.1	89
Wide (>75cm)	73%	2,114	2.65	37	25.2	57

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	28%	17%	76%	7%
Round the wicket	72%	0%	0%	100%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A big turner of the ball; extracts steep bounce; gets sharp drift in the air.

Generates well above avg turn and well above avg drift for a spin bowler; turns it in more to left-hand batters (99%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	2.29°	93rd pct (well above avg)	100% away / 0% in
Turn	4.55°	86th pct (well above avg)	0% away / 100% in
Bounce	4.5°	68th pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / Wide of 6th** (29% of play-and-misses). Overall he beats the bat 4.9% of tracked balls (false-shot 12.0%, n=892).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
