Scouting Summary

COMMON THEMES

- Left Orthodox, averaging 87.2 kph (up to 100.8).
- Typical length is **4-5m** (their good length); median 4.5 m.
- Stock ball is **full outside off, turning in, drifting away, hitting the stumps** (25% of deliveries).
- Goes round the wicket 10% of the time against left-handers.
- Turns it 3.6° on average; 17% of balls turn ≥5°.

BIGGEST THREATS

- Beats the bat 5.4% of tracked balls (false-shot 11.4%).

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (26% of runs).
- Most of his runs leak through the leg side (42%) — his main scoring release.
- Cash in when he goes **good length wide outside off** (economy 4.5, beats the bat only 15%).

Repeatability

P28

±1.2 m · vs spin bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 117 in his last 5 Tests vs 47 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	213	1	117.0	3.30	213.0	15%	89	4.99 m

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — full outside off, turning in, drifting away, hitting the stumps (25% of deliveries, economy 2.65). Minor variations: full wide outside off (22%) and a good length wide outside off (19%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
full outside off ▶	turning in, drifting away	25%	2.65	0	7%
full wide outside off ▶	turning in, drifting away	22%	3.69	0	15%
a good length wide outside off ▶	turning in, drifting away	19%	4.55	0	15%
a good length outside off ▶	turning in, drifting away	15%	2.31	0	8%
full in the channel ▶	turning, drifting	5%	0.00	0	—
a good length on the stumps ▶	turning, drifting	4%	3.43	0	—

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

Old ball (31+ ov) · 188 balls · 0 wkts · econ 4.02

Top ball type	%	Econ	Wkts
full outside off	23%	2.43	0
full wide outside off	23%	3.73	0
a good length wide outside off	20%	4.69	0
a good length outside off	14%	2.73	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Danger Zones (vs left-handers)

RUNS — WHERE MOST CONCEDED

A good length wide outside off

26% of runs (25 of 95)

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Old ball (31+ ov)	188	0	—	4.02	—	12%	4.77 m

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Middle (4–7)	165	0	—	4.33	—	12%	4.85 m

Scoring Profile (vs left-handers)

53% of his runs come in boundaries — a boundary every 13 balls; most runs go to the leg side (42%).

BOUNDARY %

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Drive	17	40	31%	6	2.35
Work/Nudge	30	32	25%	0	1.07
Sweep	7	14	11%	2	2.00
Pull/Hook	7	13	10%	2	1.86

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (70/70) — groups with <5 balls omitted.

Pitch Maps & Scoring

Ball position as it passes the stumps for wicket balls.

Runs come mostly on the off side (52%).

Where They Pitch It

Pitches it full wide outside off most often (21%); rarely drops short (0%).

Where Wickets Come From

Pitch location of wicket-taking balls.

Speed & Spells

He holds his pace across spells, is quicker in the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (90%, 181 balls); the round the wicket sample (21 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	181 (90%)	Wide of 6th	4.8 m	0%	3.45	0	48%
Round	21 (10%)	Stumps	—	—	7.71	0	74%

Over the Wicket

Where he pitches it from over the wicket (181 balls).

Round the Wicket

Round the wicket — only 21 balls to left-handers, too few to read into.

Sequencing & Over Construction

Consistent with his length (length spread ± 1.2 m; more repeatable than 28% of spin bowlers); pitches fuller as the over goes on; and holds the same crease position through the over.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	5.2 m	0%	4.26	0.0%
Ball 2	5.1 m	0%	5.03	0.0%
Ball 3	4.7 m	0%	4.76	0.0%
Ball 4	4.6 m	0%	4.45	0.0%
Ball 5	5.2 m	0%	2.29	0.0%
Ball 6	4.1 m	0%	2.44	0.0%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 70% of left-arm spin); releases about 78 cm from the middle stump.

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	32%	278	2.89	2	67.0	139
Wide (>75cm)	68%	590	2.74	6	44.8	98

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	22%	0%	19%	81%
Round the wicket	78%	0%	36%	64%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average spin bowler · vs left-handers)

A moderate spinner of the ball; skids it on with lower bounce.

Generates below avg turn and below avg drift for a spin bowler; turns it in more to left-hand batters (100%).

Percentile vs all Test spin bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Drift	1.23°	24th pct (below avg)	92% away / 8% in
Turn	3.42°	38th pct (below avg)	0% away / 100% in
Bounce	4.1°	25th pct (below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Full / 6th stump** (22% of play-and-misses). Overall he beats the bat 5.4% of tracked balls (false-shot 11.4%, n=202).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
