Scouting Summary

COMMON THEMES

- Left Fast, averaging 139.5 kph (up to 145.0).
- Typical length is **8-9m** (their good length); median -20.0 m.
- Stock ball is **back of a length wide outside off** (19% of deliveries).
- Goes round the wicket 7% of the time against left-handers.

BIGGEST THREATS

- Takes 100% of wickets pitching a **good length on the 5th stump**.
- Beats the bat 14.6% of tracked balls (false-shot 26.8%).
- Most likely to dismiss you **lbw** (100% of wickets).

AREAS TO EXPLOIT

- Concedes most runs pitching **back of a length wide outside off** (38% of runs).
- Short ball: 20% of deliveries, economy 2.9 — 1 wkts from 25 short balls.
- Most of his runs leak through the leg side (62%) — his main scoring release.

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

Threat Profile

Angle & variations: Round the wicket to RHB (37%), stays over to LHB

Danger Zones (vs left-handers)

WICKETS — WHERE MOST CAME FROM A good length on the 5th stump 100% of mapped wickets (1 of 1)	RUNS — WHERE MOST CONCEDED Back of a length wide outside off 38% of runs (6 of 16)
--	---

Most wickets come from a good length on the 5th stump, while he leaks the most runs back of a length wide outside off.

Scoring Profile (vs left-handers)

49% of his runs come in boundaries — a boundary every 14 balls; most runs go to the leg side (62%); runs come mostly by working him around (40% of runs).

BOUNDARY %	ROTATED %	BALLS / BOUNDARY
------------	-----------	------------------

49%

runs in 4s/6s

51%

runs in 1s & 2s

down the ground

Shot type	Balls	Runs	% runs	4s/6s	Runs/ball
Work/Nudge	24	29	40%	1	1.21
Drive	8	19	26%	3	2.38
Pull/Hook	5	14	19%	3	2.80
Cut	5	11	15%	2	2.20

Direction from ball-tracking (all scoring shots); shot type recorded on 100% of scoring balls (42/42) — groups with <5 balls omitted.

Pitch Maps & Scoring

At the Stumps (wickets)

Wicket balls pass the stumps mostly at stumps — pitches around 5th stump and moves it back.

Where They're Scored Off

Runs come mostly on the leg side (63%).

Where They Pitch It

Pitches it back of a length wide outside off most often (19%); mixes in the short ball (20%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 5th stump.

Speed & Spells

He keeps his pace into the 2nd innings.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Almost exclusively over the wicket to left-handers (93%, 114 balls); the round the wicket sample (9 balls) is too small to read into.

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	114 (93%)	Stumps	8.2 m	17%	3.74	1	51%
Round	9 (7%)	Stumps	—	—	1.33	0	0%

Over the Wicket

Round the Wicket

Sequencing & Over Construction

Release Point & Crease Use

A mid-height release point; releases wide of the stumps (52 cm out, wider than 85% of left-arm pace); varies his spot on the crease a lot (more than 73% of left-arm pace).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	47%	60	4.30	0	—	—
Wide (>75cm)	53%	67	4.21	3	15.7	22

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	76%	0%	42%	58%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Release Point (behind the bowler)

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Beaten Zones (play-and-miss)

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / 4th stump** (20% of play-and-misses). Overall he beats the bat 14.6% of tracked balls (false-shot 26.8%, n=123).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
