Scouting Summary

COMMON THEMES

- Right Fast, averaging 133.6 kph (up to 142.1).
- Typical length is **7-8m** (their good length); median 7.0 m.
- Stock ball is a **good length outside off, swinging both ways, seaming away, passing outside off** (23% of deliveries).
- Goes round the wicket 71% of the time against left-handers.
- Round the wicket** he shifts his pitching line from down leg to wide of 6th.

BIGGEST THREATS

- Most dangerous length is **Good Length** (10 wkts, 2.0% adjusted strike).
- Danger pitching line: **5th stump**.
- Takes 27% of wickets pitching a **good length on the 5th stump**.
- Beats the bat 11.2% of tracked balls (false-shot 18.9%).
- Most likely to dismiss you **caught** (60% of wickets).
- 56% of catches are behind the wicket (keeper / slips / gully); most often to keeper, cover: regulation, midwicket: short.

AREAS TO EXPLOIT

- Concedes most runs pitching a **good length wide outside off** (17% of runs).
- Short ball: 24% of deliveries, economy 3.6 — 2 wkts from 192 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak through the leg side (54%) — his main scoring release.
- Cash in when he goes **full outside off** (economy 5.4, beats the bat only 24%).

±1.5 m · vs pace bowlers

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's less penetrative of late (avg 32 in his last 5 Tests vs 23 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length

How he gets you out	His %	Base	Index	Catches to: Keeper 4 Cover: regulation 1 Midwicket: short 1
Caught	60%	68%	0.89×	Square leg: short leg 1 Mid on: regulation 1 Gully 1
Bowled	33%	18%	1.86×	Angle & variations: Round the wicket to LHB (71%), stays over to RHB · slower balls 2.3% (~115 kph)

*Share of his 15 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index** >1 = he does it more than most, <1 = less. Caught is high for everyone — the signal is the over-indexed row.*

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length outside off, swinging both ways, seaming away, passing outside off (23% of deliveries, economy 1.73). Minor variations: a good length wide outside off (14%) and a good length down the leg side (13%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length outside off ▶	swinging both ways, seaming away	23%	1.73	4	18%
a good length wide outside off ▶	seaming both ways, swinging both ways	14%	4.11	1	12%
a good length down the leg side ▶	swinging both ways, seaming both ways	13%	2.04	2	20%
full outside off ▶	swinging both ways, seaming away	10%	5.39	2	24%
a good length on the stumps ▶	swinging both ways, seaming both ways	10%	1.58	2	26%
full wide outside off ▶	swinging away, seaming both ways	7%	3.89	0	15%

*Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.*

New ball vs old ball

New ball (≤30 ov) · 422 balls · 6 wkts · econ 2.77

Top ball type	%	Econ	Wkts
a good length outside off	23%	1.10	1
a good length wide outside off	15%	2.29	1
a good length down the leg side	15%	2.19	0
full outside off	10%	5.16	2

Old ball (31+ ov) · 365 balls · 9 wkts · econ 3.70

Top ball type	%	Econ	Wkts
a good length outside off	24%	2.44	3
a good length wide outside off	12%	6.67	0
a good length down the leg side	10%	1.78	2
full outside off	10%	5.67	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

*Most lethal: **good length 5th stump** (4.2 wkts/100).*

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length on the 5th stump

DANGER LINE
5th stump
7 wkts / 149 balls · 3.7% adj (4.7% raw)

DANGER LENGTH
Good Length
10 wkts / 504 balls · 2.0% adj (2.0% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 5th stump
4 wkts / 96 balls · 3.1% adj (4.2% raw) · low sample

Most threatening pitching a good length on the 5th stump (10 wkts, 2.0% strike). Most wickets come from a good length on the 5th stump, while he leaks the most runs a good length wide outside off.

Danger by ball age

NEW BALL (≤30 OV)

—

· danger length good length · 6 wkts off 422 balls

OLD BALL (31+ OV)

good length 5th stump

most lethal cell · 4.2 wkts/100 · danger length good length · 9 wkts off 365 balls

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	422	6	32.5	2.77	70.3	18%	7.02 m
Old ball (31+ ov)	365	9	25.0	3.70	40.6	20%	6.94 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	397	8	22.8	2.75	49.6	16%	6.95 m
Middle (4–7)	283	5	35.6	3.77	56.6	20%	6.97 m

Bangs it in more with the old ball (0%→5% short); more short balls at the tail (8% vs 1% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

59% of his runs come in boundaries — a boundary every 13 balls; most runs go to the leg side (54%); the drive hurts most (19 fours/sixes at 2.6 runs/ball).

BOUNDARY %

Work/Nudge	56	85	36%	6	1.52
Cut	13	34	15%	7	2.62
Pull/Hook	6	12	5%	2	2.00

Direction from ball-tracking (all scoring shots); shot type recorded on 61% of scoring balls (124/203) — groups with <5 balls omitted.

Pitch Maps & Scoring

Wicket balls pass the stumps mostly at stumps — pitches around 5th stump and moves it back.

Runs come mostly on the leg side (56%).

Where They Pitch It

Pitches it a good length wide outside off most often (13%); mixes in the short ball (24%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 5th stump, but strikes most often pitching on the 5th stump.

Speed & Spells

He holds his pace across spells, keeps his pace into the 2nd innings, and is as quick on the final day as day one.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from down leg to wide of 6th — economy 3.41→3.12, a wicket every 57→51 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	227 (29%)	Down leg	7.0 m	5%	3.41	4	67%
Round	560 (71%)	Wide of 6th	6.9 m	2%	3.12	11	55%

Over the Wicket

Where he pitches it from over the wicket (227 balls).

Round the Wicket

Where he pitches it from round the wicket (560 balls).

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ± 1.7 m; more repeatable than 66% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Doubles up on the short ball — pitches up only 21% of the time after banging one in; sets batters up then pitches fuller for the wicket (43% of dismissals come off a ball fuller than the one before).

Across 44 dismissals, the wicket ball lands about 77 cm fuller than the ball before it — that's the change that brings the wicket.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.2 m	2%	3.26	1.4%
Ball 2	6.8 m	2%	3.40	2.1%
Ball 3	6.9 m	2%	3.18	1.5%
Ball 4	7.3 m	3%	3.07	1.5%
Ball 5	6.6 m	6%	3.26	2.4%
Ball 6	7.0 m	3%	3.08	2.6%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A high release point (taller than 84% of right-arm pace); releases wide of the stumps (86 cm out, wider than 88% of right-arm pace); varies his spot on the crease a lot (more than 81% of right-arm pace). Comes wider over the wicket (86 cm over vs 55 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	27%	702	3.21	12	31.2	58
Wide (>75cm)	73%	1,869	3.04	46	20.6	41

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	77%	0%	10%	90%
Round the wicket	23%	1%	84%	15%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who moves it both ways (58% away / 42% in); skids through at a lower trajectory.

Generates above avg seam and above avg swing for a pace bowler; seams it away more to left-hand batters (56%).

Swing by ball age to left-hand batters: new ball (≤25 ov, n=191) 48% away / 52% in; old ball (≥40 ov, n=178) 66% away / 34% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.99°	72nd pct (above avg)	58% away / 42% in
Seam	0.62°	72nd pct (above avg)	57% away / 43% in
Bounce	3.8°	23rd pct (below avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Down leg** (18% of play-and-misses). Overall he beats the bat 11.2% of tracked balls (false-shot 18.9%, n=752).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
