Scouting Summary

COMMON THEMES

- Right Medium, averaging 128.2 kph (up to 136.2).
- Typical length is **7-8m** (their good length); median 6.6 m.
- Stock ball is **a good length wide outside off, swinging both ways, seaming away, passing outside off** (21% of deliveries).
- Goes round the wicket 58% of the time against left-handers.
- Round the wicket** he shifts his pitching line from stumps to wide of 6th and brings his length back to 7.3 m.

BIGGEST THREATS

- Most dangerous length is **Good Length** (10 wkts, 2.7% adjusted strike).
- Danger pitching line: **6th stump**.
- Takes 23% of wickets pitching **a good length on the 6th stump**.
- Beats the bat 12.3% of tracked balls (false-shot 22.4%).
- Most likely to dismiss you **caught** (71% of wickets).
- 75% of catches are behind the wicket (keeper / slips / gully); most often to keeper, slip: 2nd, gully.

AREAS TO EXPLOIT

- Concedes most runs pitching **a good length wide outside off** (19% of runs).
- Short ball: 20% of deliveries, economy 3.2 — 0 wkts from 125 short balls.
- Away from good length, the wicket threat drops off — look to score in the less-productive lengths.
- Most of his runs leak square/through the off side (44%) — his main scoring release.

Bowling Fingerprint

Percentile within same-type peers (grey = the peer distribution, line = this bowler). Release/crease vs hand × pace/spin; movement/speed/repeatability vs pace/spin. Release & speed are modern-era (2017+ / partial). **Crease variation** = how much he moves his release point sideways across the crease from ball to ball (within his main angle): a high percentile = he varies where he lets the ball go a lot, a low percentile = he releases from the same spot every ball. **Repeatability** = length consistency over his stock-length band (2–11 m, so deliberate yorkers and bouncers don't count as poor control): a high percentile = tighter, more metronomic lengths than peers; a low percentile = he varies his length more. A marker at the very edge = he sits beyond the typical peer range on that trait.

He's around his career level lately (avg 21 last 5 vs 24 career).

Window	Balls	Wkts	Avg	Econ	SR	False%	Avg speed	Avg length
Last 5 Tests	348	7	20.9	2.52	49.7	23%	130	7.51 m

AVG SWING
0.99°
in-air

How he gets you out	His %	Base	Index
Caught	71%	68%	1.04×
LBW	18%	14%	1.23×
Bowled	12%	18%	0.66×

Share of his 17 wickets by type, indexed against the base rate vs the average pace bowler to LHB (men's Tests). **Index >1** = he does it more than most, <**1** = less. Caught is high for everyone — the signal is the over-indexed row.

Catches to: [Keeper 4](#) [Slip: 2nd 2](#) [Gully 1](#) [Fine leg: leg slip 1](#)
[Mid off: silly 1](#) [Cover: short extra 1](#)

Angle & variations: Round the wicket to LHB (57%), stays over to RHB · slower balls 0.8% (~116 kph)

Stock Ball & Ball Types (vs left-handers) [▶ watch stock balls](#)

Stock ball — a good length wide outside off, swinging both ways, seaming away, passing outside off (21% of deliveries, economy 2.83). Minor variations: a good length outside off (17%) and a good length on the stumps (16%).

Ball type (pitch length × pitching line)	Movement	%	Econ	Wkts	Beaten %
a good length wide outside off ▶	swinging both ways, seaming away	21%	2.83	0	20%
a good length outside off ▶	swinging in, seaming both ways	17%	1.76	5	27%
a good length on the stumps ▶	swinging in, seaming back	16%	1.35	1	18%
a good length down the leg side ▶	swinging in, seaming back	13%	2.77	2	23%
full wide outside off ▶	seaming, swinging	6%	2.36	1	22%
a good length in the channel ▶	swinging in, seaming	5%	1.62	2	27%

Ball type = pitch-length band × pitching-line region. **Movement** = swing in the air + seam/turn off the pitch, whichever is material, dominant first (ball-tracking, tracked balls only; blank if too few). **Beaten %** = false-shot rate on tracked balls. The stock-ball line above also notes where it passes the stumps.

New ball vs old ball

New ball (≤30 ov) · 371 balls · 13 wkts · econ 2.98

Top ball type	%	Econ	Wkts
a good length on the stumps	22%	1.04	1
a good length down the leg side	19%	2.38	1
a good length outside off	15%	1.91	5
a good length wide outside off	10%	2.90	0

How his ball types and threat shift with ball age (split at 30 overs). Empty side = too few balls in that phase.

Old ball (31+ ov) · 264 balls · 4 wkts · econ 2.98

Top ball type	%	Econ	Wkts
a good length wide outside off	37%	2.80	0
a good length outside off	19%	1.58	0
full outside off	8%	6.38	0
full wide outside off	7%	1.29	0

Danger Zones (vs left-handers) [▶ watch danger balls](#)

WICKETS — WHERE MOST COME FROM
A good length on the 6th stump
23% of mapped wickets (3 of 13)

RUNS — WHERE MOST CONCEDED
A good length wide outside off
19% of runs (52 of 267)

DANGER LINE
6th stump
3 wkts / 64 balls · 3.5% adj (4.7% raw) · low sample

DANGER LENGTH
Good Length
10 wkts / 368 balls · 2.7% adj (2.7% raw)

MOST LETHAL ZONE (BY RATE)
Good Length / 6th stump
3 wkts / 48 balls · 3.9% adj (6.2% raw) · low sample

Most threatening pitching a good length on the 6th stump (10 wkts, 2.7% strike). Most wickets come from a good length on the 6th stump, while he leaks the most runs a good length wide outside off.

Zone shares are over his **mapped** wickets — 4 wickets pitched too full to place on the map (tracked length at/behind the crease), so they sit outside the grid.

Match-ups (vs left-handers)

New ball vs old ball

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
New ball (≤30 ov)	371	13	14.2	2.98	28.5	22%	7.05 m
Old ball (31+ ov)	264	4	32.8	2.98	66.0	23%	7.22 m

By batting position

Split	Balls	Wkts	Avg	Econ	SR	False%	Med length
Top order (1–3)	225	6	18.0	2.88	37.5	18%	6.95 m
Middle (4–7)	315	9	18.9	3.24	35.0	22%	7.16 m

Bangs it in more with the old ball (0%→4% short); more short balls at the tail (7% vs 0% to the top 3).

Lower average / higher false-shot = the match-up that suits him; higher average = where batters have got on top. Med length = his median pitch length in that split.

Scoring Profile (vs left-handers)

55% of his runs come in boundaries — a boundary every 15 balls; most runs go to the off side (44%); the drive hurts most (10 fours/sixes at 2.4 runs/ball).

BOUNDARY %

Drive	27	66	34%	10	2.44
Cut	6	18	9%	4	3.00

Direction from ball-tracking (all scoring shots); shot type recorded on 71% of scoring balls (111/157) — groups with <5 balls omitted.

Pitch Maps & Scoring

Where They Pitch It

Pitches it a good length wide outside off most often (20%); mixes in the short ball (19%).

Where Wickets Come From

Wickets come mostly from balls pitched a good length on the 6th stump, but strikes most often pitching on the 6th stump.

Speed & Spells

He drops ~1.7 km/h from his opening spell to later spells, keeps his pace into the 2nd innings, and loses ~1.7 km/h by the later days.

Speed by Spell

By spell — opening burst vs later spells.

Speed by Innings

1st vs 2nd innings of the match.

Speed by Day

By match day — fatigue across the game.

Over vs Round the Wicket (vs left-handers)

Round the wicket his pitching line moves from stumps to wide of 6th; and pitches 48 cm shorter — economy 3.39→2.67, a wicket every 27→53 balls (over→round).

Angle	Balls	Pitch line	Length	Short %	Econ	Wkts	Bdry %
Over	267 (42%)	Stumps	6.9 m	0%	3.39	10	64%
Round	368 (58%)	Wide of 6th	7.3 m	3%	2.67	7	46%

Over the Wicket

Where he pitches it from over the wicket (267 balls).

Round the Wicket

Where he pitches it from round the wicket (368 balls).

Sequencing & Over Construction

Metronomic — hammers the same length repeatedly, little to feast on (length spread ±1.4 m; more repeatable than 91% of pace bowlers); holds a steady length right through the over; and holds the same crease position through the over.

Across 28 dismissals, his wicket ball is close in length and pace to the delivery before it — he builds pressure with repetition, not a big change-up.

Ball in over	Median length	Short %	Econ	Wkt %
Ball 1	7.3 m	1%	3.03	1.0%
Ball 2	7.1 m	0%	2.52	0.0%
Ball 3	6.7 m	0%	2.04	2.9%
Ball 4	6.9 m	5%	3.61	2.9%
Ball 5	7.1 m	2%	3.76	7.8%
Ball 6	7.4 m	1%	2.86	1.9%

Length spread = std-dev of pitch length (smaller = more repeatable). The table shows how his length, scoring and wicket rate shift across the six balls of an over. Set-up lines compare each ball with the previous delivery in the same over (career, all batters).

Release Point & Crease Use

A mid-height release point; releases about 59 cm from the middle stump. Comes wider round the wicket (59 cm over vs 85 cm round).

Crease position	% balls	Balls	Econ	Wkts	Avg	SR
Standard (45–75)	78%	1,365	2.68	25	24.4	55
Wide (>75cm)	22%	379	2.88	5	36.4	76

How he goes when he releases tight / standard / wide of the middle stump (all release-tracked balls).

Angle	Balls	Tight	Standard	Wide
Over the wicket	84%	0%	91%	9%
Round the wicket	16%	0%	8%	92%

His crease-position mix, split by over vs round. Release data is modern-era (2017+); percentiles vs same hand + type.

Where he lets the ball go — lateral position × height (purple density). Over and round labelled; dotted lines mark tight/standard/wide and the return creases.

Movement (vs the average pace bowler · vs left-handers)

A swing bowler who predominantly inswing (79%); gets extra bounce.

Generates about average seam and above avg swing for a pace bowler; seams it in more to left-hand batters (53%).

Swing by ball age to left-hand batters: new ball (≤ 25 ov, n=177) 11% away / 89% in; old ball (≥ 40 ov, n=91) 35% away / 65% in.

Percentile vs all Test pace bowlers; direction is which way it moves to this batter. Bounce = extra bounce vs expected.

Movement	Avg	vs average	Direction (vs left-handers)
Swing	0.99°	73rd pct (above avg)	21% away / 79% in
Seam	0.58°	54th pct (about average)	47% away / 53% in
Bounce	4.1°	60th pct (above avg)	—

Beaten — Grid

Length × line where he beats the bat — exact counts per cell.

Beaten — Heatmap

The same play-and-miss density, smoothed, with pitch markings.

Beats the bat most at **Good Length / Stumps** (16% of play-and-misses). Overall he beats the bat 12.3% of tracked balls (false-shot 22.4%, n=603).

Test-match career data. Beaten/false-shot use ~38% shot-quality tracking; turn/drift ~30% ball-tracking. Catches split by fielding position (DeliveryFielders view); some catches have no recorded position. Danger zones use empirical-Bayes shrinkage (≥3 wkts to qualify).
